

FY2015 CHNA&HIP Progress Report

Davis County

Community Health Improvement Plan

GOAL	Strategies	Progress on Strategies
Develop community Partners Coalition	Invite Key community Partners and organize regular meetings	In the fall of 2013 we organized a Community Wellness Coalition and during the spring of 2014 worked together to develop a Walking School Program. We were able to gather the needed volunteers but ran into big delays with getting our background checks returned in a timely manner, had VERY poor participation from parents. We were able to complete the initial trial program but with no enthusiasm from the community we were unable to develop it into an ongoing program. We have also seen the same with our coalition. We had fairly good participation when we first developed it but with each meeting the attendance dwindled to where we only had 3 people attending. At that time we decided to combine our efforts with other groups/organizations actively working on a project. We worked with the Child Abuse Prevention Council and were able to provide daily activities throughout the county during the month of April as well as provided educational trainings on the ACE's program and Youth Mental Health First Aid.

Davis County

Community Health Improvement Plan

GOAL	Strategies	Progress on Strategies
Reduce number of chronic diseases in the county	Survey broad spectrum of residents of Davis County	Working with the Davis County Hospital we completed our last CHNA in 2013. The #1 need addressed at that time was access to Mental Health. Working with a local Licensed Mastered Social Worker and a Licensed Marriage and Family Therapist they have developed the Davis County Mental Health Community Services: Emergency Prescreening program to assist during times of mental health crisis.
		While working to reduce the chronic diseases in the county our local hospital has been able to add one part time physician, a full time pediatrician and a full time allergy/pulmonary specialist to the physicians clinic which has been a huge benefit to citizens of Davis County. (recruiting primary physicians was the #3 identified need)
		Our Wellness Coalition was able to work with the Davis County Trails project. They are working to develop a trail to connect our rec center to the pool, ball fields, and McGowen farm which will increase activity for all who choose to use it. First phase has been started which is building a small bridge at the head of the trail. Plans in process to begin concrete work on the trail this summer.
		Next CHNA is planned to be complete in the fall of 2015
	Offer education on hypertension & diabetes	Public Health is working with the hospital on a transitional care program to help reduce readmissions to the hospital by providing follow up phone calls, disease education, home visits, following hospital discharge.
		We provide monthly B/P screenings at the Senior Center monthly.
		Information provided on hypertension, diabetes, BMP, safe medications during the local fair and during a community wellness screening during the month of February. B/P screenings offered during our annual Walk for Life in May. Public Health staff provides B/P screenings at some business events and company wellness screenings.
	Work with master gardeners in community to develop a community garden	We tried to work with the master gardeners through out wellness coalition but as stated above that was not real successful although our gardeners club is active. They have a community garden and provide produce to the local Sr. Center and during the farmers markets. They also provide education through the ISU extension office.
		The local school also has a garden that is used for educational purposes as well as produce supplied to the school to provide meals Monday-Friday to all children in the county up to age 18 regardless of income status. This program started in 2014 and was very successful so will continue again this year.
